#### 1.INTRODUCTION

### 1.1 **Project Overview**

NewsTracker is a fullstack web application which allows users to register along with their favourite topics, upon login the app displays the news based on the user's interest. The news displayed in the app is based on the Newcatcher API and Cricbuzz API from Rapid API site. A news-sharing app wants to help users find relevant and important news easily every day and also provide explicitly news from that users locality/region which may of help to the user.

## 1.2 Purpose

Enabling users to view news from anywhere at anytime. It also helps to reduce the time to get information about a specific topic. Also enables a person to get an updated news which may help Business people to make business related decisions quickly and correctly.

### 2. LITERATURE SURVEY

## 2.1 Existing problem

Physical newspapers are old fashioned in this digital era. They cost money to buy, can easily be damaged, limited amount of information, not flexible to modifications, poor quality. Sometimes may show unrelevant and updated news

### 2.3 **Problem Statement Definition**

Newspaper contains limited , non user/reader specific, Location specific news . There are multiple news-sharing apps available which can be used by a single user and are often spammed with notifications. There is also a lot of unwanted news which gets shared. So it may take a lot of time for the user to find the news he/she likes. A news-sharing app wants to help users find relevant and important news easily every day and also provide explicitly news from that users locality/region which may of help to the user.

#### 3. IDEATION & PROPOSED SOLUTION

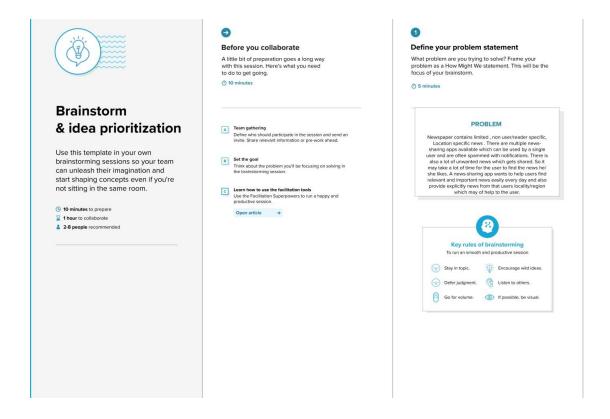

## 3.1 Empathy Map Canvas

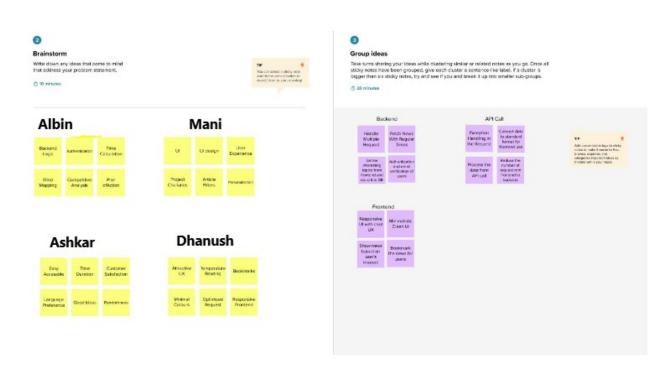

3.2 Ideation & Brainstorming

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

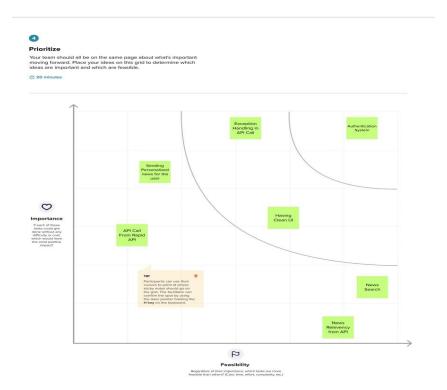

## Step-1: Team Gathering, Collaboration and Select the Problem Statement

## Step-2: Brainstorm, Idea Listing and Grouping

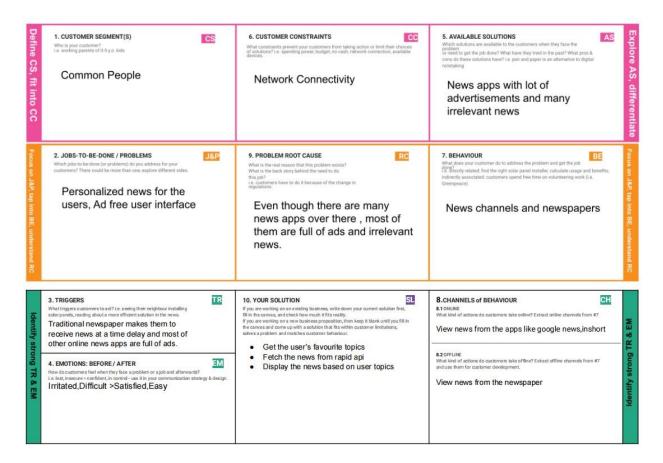

## Step-3: Idea Prioritization

# 3.3 Proposed Solution

| S.No. | Parameter                                | Description   |
|-------|--|---|
| 1.    | Problem Statement (Problem to be solved) | Most people don't like to carry a newspaper with them. Some people want them to be updated only in the area they are interested in  |
| 2.    | Idea / Solution description              | An application needs to be developed in which users can read news whenever they want and they will be able to customize their area of interest. So that they will be notified, if any new news is updated in their interested areas.  |
| 3.    | Novelty / Uniqueness                     | A user can read news only from their interested fields rather than reading all the news. This application provides users with a trusted and secured ecosystem. News shared through the application is original and spam free.   |
| 4.    | Social Impact / Customer Satisfaction    | This application encourages its users to provide feedback. Based on that feedback, developments were made eventually.   |
| 5.    | Business Model (Revenue Model)           | Add advertisements to the application, so that we can get revenue from those advertisement-sponsored organizations. More advertisements may irritate the user. Add premium subscription, users who subscribe for premium won't get advertisements.                                      |
| 6.    | Scalability of the Solution              | As it was an application-based project, correct ideation and execution can develop an application with no bugs and errors, so that the user might like our application and some might suggest and share it to their surroundings, resulting in an increase in our application insights. |

### 3.4 Problem Solution fit

# 4. REQUIREMENT ANALYSIS

# 4.1 Functional requirement

| FR  | Functional        | Sub Requirement (Story / Sub-Task) |

| FR- | Collecting News   | Collecting news from rapid API at  |
| 4   |                   | regular Intervals                  |
| FR- | Bookmark          | Bookmarking Favourite news for the |
| 5   |                   | user                               |
| FR- | Login             | Loging in the user using the       |
| 6   |                   | registered email and password      |
| FR- | News Feed         | Showing the news fetched from the  |
| 7   |                   | API to the user                    |

# **4.2 Non-Functional requirements**

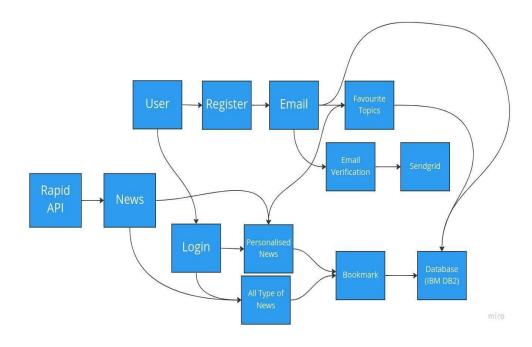

| FR No. | Non-Functional | Description                          |
|--------|----------------|--------------------------------------|
|        | Requirement    |                                      |
| NFR-1  | Usability      | The app should be able to used by    |
|        |                | all people                           |
| NFR-2  | Security       | The app should authenticate the      |
|        |                | legitimate users and should restrict |
|        |                | bot attacks                          |
| NFR-3  | Reliability    | The app should show the news         |
|        |                | which are non fake and spam free     |

| NFR-4 | Performance  | The app should be accessible in    |  |
|-------|--------------|------------------------------------|--|
|       |              | older devices too                  |  |
| NFR-5 | Availability | The app should be available to all |  |
|       |              | devices                            |  |
| NFR-6 | Scalability  | The app should handle multiple     |  |
|       |              | users and be                       |  |
|       |              | designed in such a way for future  |  |
|       |              | upgrade                            |  |

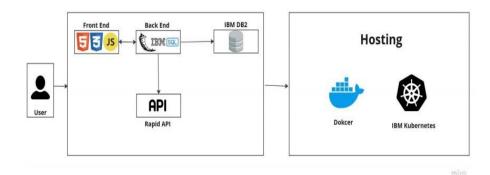

### 5. PROJECT DESIGN

## **5.1 Data Flow Diagrams**

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

## **5.2 Solution & Technical Architecture**

## **5.3 User Stories**

| User   | Functional   | User  | User Story / | Acceptan    | Priori | Release  |

## **6.2 Sprint Delivery Schedule**

### 7.CODING & SOLUTIONING

### **7.1 Feature 1**

## **Python**

- Python is a high-level, general-purpose programming language. Its design philosophy emphasizes code readability with the use of significant indentation.
- Python is dynamically-typed and garbage-collected.
- It supports multiple programming paradigms, including structured (particularly procedural), object-oriented and functional programming.
- It is often described as a "batteries included" language due to its comprehensive standard library.
- Guido van Rossum began working on Python in the late 1980s as a successor to the ABC

- programming language and first released it in 1991 as Python 0.9.0.
- Python 2.0 was released in 2000 and introduced new features such as list comprehensions, cycle-detecting garbage collection, reference counting, and Unicode support.
- Python 3.0, released in 2008, was a major revision that is not completely backward-compatible with earlier versions.
- Python consistently ranks as one of the most popular programming languages

#### **7.2 Feature 2:**

#### Flask

- Flask is a micro web framework written in Python.
- It is classified as a microframework because it does not require particular tools or libraries.
- It has no database abstraction layer, form validation, or any other components where preexisting third-party libraries provide common functions.
- However, Flask supports extensions that can add application features as if they were implemented in Flask itself.
- Extensions exist for object-relational mappers, form validation, upload handling, various open authentication technologies and several common framework related tools.
- Applications that use the Flask framework include Pinterest and LinkedIn.
- Flask has become popular among Python enthusiasts. As of October 2020, it has second most stars on GitHub among Python web-development frameworks, only slightly behind Django,[14] and was voted the most popular web framework in the Python Developers Survey 2018, 2019, 2020 and 2021.

#### 7.3 Database scheme:

#### IBM DB2

- Db2 is a family of data management products, including database servers, developed by IBM.
- It initially supported the relational model, but was extended to support object—relational features and non-relational structures like JSON and XML.

- The brand name was originally styled as DB/2, then DB2 until 2017 and finally changed to its present form.
- Unlike other database vendors, IBM previously produced a platform-specific Db2 product for each of its major operating systems.
- However, in the 1990s IBM changed track and produced a Db2 common product, designed with a mostly common code base for L-U-W (Linux-Unix-Windows); DB2 for System z and DB2 for IBM i are different. As a result, they use different drivers.

#### **Kubernetes**

- Kubernetes is an open-source container orchestration system for automating software deployment, scaling, and management.
- Google originally designed Kubernetes, but the Cloud Native Computing Foundation now maintains the project.
- Kubernetes works with Docker, Containerd, and CRI-O.
- Originally, it interfaced exclusively with the Docker runtime through a "Dockershim"; however, from November 2020 up to April 2022, Kubernetes has deprecated the shim in favor of directly interfacing with the container through Containerd, or replacing Docker with a runtime that is compliant with the Container Runtime Interface (CRI).
- With the release of v1.24 in May 2022, "Dockershim" has been removed entirely.

#### 8. ADVANTAGES & DISADVANTAGES

- This app can be accessed anywhere and anytime, So that the user can view the news
- Its ad free
- The news is only based on the API

It may contain some unwanted content but we don't have control over it • The user can bookmark their favourite news.

### 10 Results:

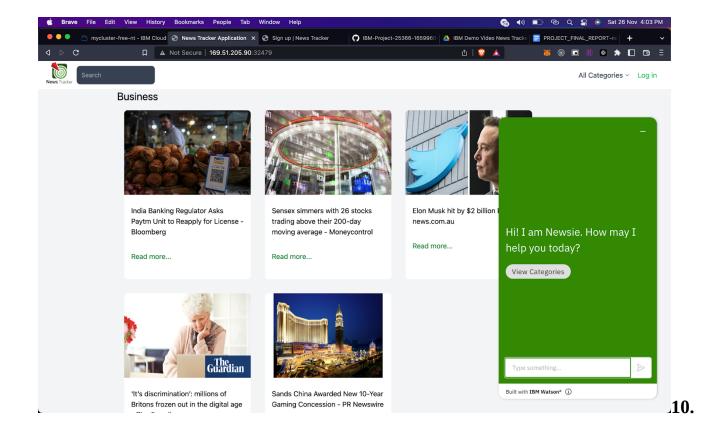

### **10.1 Performance Metrics:**

- Project metrics are used to track the progress and performance of a project.
- Monitoring parts of a project like productivity, scheduling, and scopemake it easier for team leaders to see what's on track.
- As a project evolves, managers need access to changing deadlines or budgets to meet their client's expectations

## **Output Snapshots:**

### 11.CONCLUSION

Thus we have developed a full stack application based on the plans and within the given time. We have tested the application in both desktop and mobile and it worked well, Overall it was a great experience.

## 12. FUTURE SCOPE

In future we may integrate our own news API instead of third party APIs and may develop a mobile native application so that it can be used in both android and ios.
